VIRTUALIZATION

Steps to Install

Here I am going to use virtual box software for creating a virtual machine

Step1 :- Go to Browser and search for virtualbox.

Step2 :- Click oracle vm virtual box (https://www.virtualbox.org)

Step3 :- Download Virtual Box 7010 platform package for windows Host

Step4 :- After clicking on the windows host, you executable field will start to download

Step5 :- After downloading the executable file of virtualbox go to downloads and click on the executable file

Step6 :- A setup wizard dialog box will be opened click next

Step7 :- Custom setup and location Where the virtual box need to installed You can install on any drives.

Step8 :- After setting the location click next.

Step9 :- Then leval the options displayed on the screen as depult and click next.

Step10 :- A warning for network interface will be shown If you are ok with it then click

Step11 :- Then on the next page click install.

Step12 :- After installation, Just click finish on the new window with checkbox checked.

Step13 :- After closing the virtual box setup virtual box window will be opened.

Step14 :- After all there steps, your virtual box will be successfully installed.

Steps to Create

Step1 :- Open Virtual box

Step2 :- click new

Step3 :- Enter the name of the virtual machine, location and type of VM and version of the VM and click next.

Step4 :- Allocate the Hardware size and no. of processors and click next.

Step5 :- After finishing the above step a summary will be displayed and click finish.

Step6 :- For shrinking or expand the size of hard disk go to tools → virtual media player and click on the VM that you have created

Step7 :- By clicking on it, the information will be displayed But we can expand the disk size but can't shrink below the minimum size of the Hand disk.

Step8 :- At last, VM will be created.
